

Table of Contents:

- Handbook of Clinical Neurology 3rd Series
- Foreword
- Preface
- SECTION 1: Introduction
 - Chapter 1: Introduction to autoimmune neurology
 - Abstract
 - Autoimmune neurology: a new subspecialty
 - Neural antibodies resulting from the body's immune response to cancer
 - Some autoantibodies targeting intracellular antigens are not closely linked to tumors
 - Pathogenic autoantibodies
 - New associations and challenges
 - Conclusion
 - Acknowledgments
- SECTION 2: Basic neurobiology
 - Chapter 2: Signaling molecules of the CNS as targets of autoimmunity
 - Abstract
 - Basic principles of neuronal signaling
 - Excitatory neurotransmission
 - Inhibitory neurotransmission
 - Chapter 3: The blood–brain barrier
 - Abstract
 - Introduction
 - Characteristics of CSF and the blood–CSF barrier
 - The blood–brain barrier from an evolutionary point of view
 - Multicellular structure and function of the neurovascular unit
 - Potential roles of the BBB in autoimmune neurologic disease
 - Concluding remarks
 - Chapter 4: Overview of the immune system
 - Abstract
 - Introduction
 - Innate mechanisms of immunity
 - Key players and their roles in adaptive immunity
 - Antigen-driven B-cell differentiation and antibody production
 - B-cell antigen encounter and BCR signaling
 - The germinal center reaction
 - Antibody isotypes
 - Overview of T_H cells in peripheral B-cell maturation
 - B cells as orchestrators of immunity
 - CD4 + T cells in autoimmune disease
 - CD8 + T cells in autoimmune disease
 - The immune system gone awry, leading to autoimmune disease
 - Emerging therapeutic modalities for treatment of autoimmune disease
 - Chapter 5: Cellular, synaptic, and circuit effects of antibodies in autoimmune CNS synaptopathies
 - Abstract
 - Introduction
 - Establishing a pathogenic role for antibodies targeting synaptic proteins
 - Cellular and synaptic mechanisms mediated by antibodies
 - Homeostatic plasticity in response to antibody-mediated decrease of receptor levels
 - *In vivo* effects of antireceptor antibodies on circuits and behavior: insights from animal models and patients
 - Source and brain access of autoantibodies
 - Conclusions and future directions
 - Acknowledgments
 - Chapter 6: Immunopathology: autoimmune glial diseases and differentiation from multiple sclerosis
 - Abstract
 - Introduction
 - Neuromyelitis optica
 - Other putative autoimmune gliopathies

- Conclusion
- Chapter 7: Neuropathology of autoimmune encephalitides
 - Abstract
 - Introduction
 - Neuropathologic features and immune mechanisms
 - Summary and future perspectives
- Chapter 8: Neurologic autoimmunity: mechanisms revealed by animal models
 - Abstract
 - Introduction
 - The neuromuscular junction
 - Autonomic ganglia and peripheral nerves
 - Central nervous system
 - Concluding remarks
- SECTION 3: Clinical: autoimmune neurological disorders
 - Chapter 9: Detection methods for neural autoantibodies
 - Abstract
 - Introduction
 - Antibody assays
 - Indirect immunohistochemistry
 - Biomarker assays: western blot or line blot
 - Native antigens
 - Radioimmunoprecipitation assays
 - Fluorescence immunoprecipitation assay
 - Primary cultures
 - Cell-based assays
 - Specificity of secondary antibodies
 - Cut-off for quantitative assays
 - Which body fluid to test in autoimmune neurology?
 - Conclusions
 - Disclosures
 - Chapter 10: Paraneoplastic and idiopathic autoimmune neurologic disorders: approach to diagnosis and treatment
 - Abstract
 - Introduction
 - The diagnostic evaluation
 - Treatment
 - Acute therapy – diagnostic test
 - Future direction
 - Chapter 11: Voltage-gated potassium channel–complex autoimmunity and associated clinical syndromes
 - Abstract
 - Introduction
 - Peripheral nerve hyperexcitability
 - Morvan's syndrome
 - Diagnostic evaluation
 - Investigations
 - Differential diagnosis
 - Pathophysiology and immunopathology
 - Therapeutic approach
 - Future therapies
 - Future directions
 - Chapter 12: Anti-NMDAR encephalitis and other glutamate and GABA receptor antibody encephalopathies
 - Abstract
 - Introduction
 - Epidemiology of Anti-NMDAR encephalitis
 - Clinical course and prognosis of Anti-NMDAR encephalitis
 - Epidemiology and clinical features associated with other antibodies
 - Diagnostic evaluation
 - Pathophysiology and immunopathology
 - Therapeutic approach
 - Future directions
 - Chapter 13: Autoimmune epilepsy
 - Abstract
 - Introduction

- Rasmussen's encephalitis
- Seizures occurring in systemic autoimmune diseases
- Seizures due to antibody-mediated neurologic autoimmune disorders
- Autoimmune epilepsy: diagnostic and therapeutic approach
- Summary
- Chapter 14: Autoimmune dementia and encephalopathy
 - Abstract
 - Introduction
 - Clinical features
 - Clinical course and prognosis
 - Bedside cognitive testing and detailed neuropsychologic testing
 - Risk factors
 - Serum and cerebrospinal fluid evaluation
 - Autoantibodies
 - Neuroimaging
 - Electroencephalogram
 - Brain biopsy and pathology
 - Cancer investigation
 - Differential diagnosis
 - Pathophysiology
 - Therapeutic approach
 - Future therapies and future direction
- Chapter 15: Autoimmunity in neuropsychiatric disorders
 - Abstract
 - Introduction
 - Brain and immune system interaction
 - Evidence pointing towards an immune pathophysiology in different psychiatric disorders
 - Autoimmune encephalitis and link to neuropsychiatric disorders
 - Disorders of psychologic development and mental retardation
 - Future directions
 - Acknowledgment
- Chapter 16: Central nervous system vasculitis in adults and children
 - Abstract
 - Introduction
 - Etiopathogenesis
 - Clinical presentation
 - Subsidiary examinations
 - Diagnosis
 - Treatment
 - Conclusions
- Chapter 17: Autoimmune movement disorders
 - Abstract
 - Introduction
 - Clinical disorders
 - Evaluation
 - Treatment
 - Future directions
- Chapter 18: Autoimmune sleep disorders
 - Abstract
 - Introduction
 - Sleep manifestations associated with specific autoantibodies (Table 18.1)
 - Narcolepsy as an autoimmune disease
 - Future directions
- Chapter 19: Autoimmune myelopathies
 - Abstract
 - Introduction
 - Clinical course and prognosis
 - Risk factors
 - Neuroimaging
 - Differential diagnosis
 - Serum and cerebrospinal fluid (CSF) evaluation
 - Autoantibodies
 - Spinal cord biopsy and pathology of autoimmune myelopathies
 - Cancer investigation

- Pathophysiology
- Therapeutic approach
- Conclusions and future direction
- Disclosures
- Chapter 20: Autoimmunity in visual loss
 - Abstract
 - Introduction
 - The anatomic basis for patterns of visual loss
 - General considerations for autoimmune mechanisms for visual loss
 - Diagnosis and differential diagnosis of autoimmune visual loss
 - Autoimmune retinopathies
 - Conclusion
 - Review of literature
 - Conflict of interest
 - Acknowledgments
- Chapter 21: Autoimmune AQP4 channelopathies and neuromyelitis optica spectrum disorders
 - Abstract
 - Introduction
 - Epidemiology and genetics
 - Clinical course and prognosis
 - Diagnostic evaluation
 - Pathophysiology
 - Immunopathology
 - Therapeutic approach
 - Future direction
- Chapter 22: Autoimmune autonomic disorders
 - Abstract
 - Introduction
 - Autoimmune autonomic ganglionopathy (AAG)
 - Paraneoplastic autonomic neuropathy
 - Other autoimmune neurologic disorders with autonomic features
 - Other autonomic disorders with possible autoimmune cause
 - Differential diagnosis
 - Evaluation
 - Treatment
 - Future directions
- Chapter 23: Autoimmune-mediated peripheral neuropathies and autoimmune pain
 - Abstract
 - Introduction
 - Nonparaneoplastic immune-mediated neuropathies
 - Paraneoplastic and idiopathic immune-mediated neuropathies
 - M_gus-associated idiopathic immune-mediated neuropathies and pooms syndrome
 - Autoimmune pain
 - Summary
- Chapter 24: Neuromuscular junction disorders
 - Abstract
 - Introduction
 - The neuromuscular junction
 - Future directions
- Chapter 25: Autoimmune muscle disease
 - Abstract
 - Introduction
 - Epidemiology and genetics
 - Clinical course and prognosis
 - Diagnostic evaluation
 - Clinical approach to myositis autoantibody testing
 - Pathophysiology and immunopathology
 - Therapeutic approach
 - Symptomatic treatment
 - Future therapies
 - Other rare forms of inflammatory myopathy
 - Future directions
- Chapter 26: Autoimmune neurologic disorders in children
 - Abstract

- Introduction
- General considerations for the pediatric patient
- Autoimmune central nervous system disorders
- Autoimmunity in childhood neurodegenerative disorders
- CNS autoimmunity in systemic inflammatory disorders
- Future direction
- Disclosures
- Chapter 27: Current and future immunotherapy targets in autoimmune neurology
 - Abstract
 - Introduction
 - Immunotherapies by pharmacologic category or compound
 - Targeted immunotherapies in disease prototypes
 - Acknowledgments
- Errata
- Index
